

MITCH CHARTER SCHOOL
Integrated Pest Management Plan
2017-18

I. INTRODUCTION

Structural and landscape pests can pose significant problems in schools. Pests such as mice and cockroaches can trigger asthma. Mice and rats are vectors of disease. Many children are allergic to yellow jacket stings. The pesticides used to remediate these and other pests can also pose health risks to people, animals, and the environment. These same pesticides may pose special health risks to children due in large part to their still-developing organ systems. Because the health and safety of students and staff is our first priority – and a prerequisite to learning – it is the policy of MITCH Charter School to approach pest management with the least possible risk to students and staff. In addition, Senate Bill 637 (incorporated into ORS Chapter 634 upon finalization in 2009) requires all school districts to implement integrated pest management in their schools. For this reason, the Board of Directors adopts this integrated pest management plan.

II. WHAT IS INTEGRATED PEST MANAGEMENT?

Integrated Pest Management, also known as IPM, is a process for achieving long-term, environmentally sound pest suppression through a wide variety of tactics. Control strategies in an IPM program include structural and procedural improvements to reduce the food, water, shelter, and access used by pests. Since IPM focuses on remediation of the fundamental reasons why pests are here, pesticides are rarely used and only when necessary.

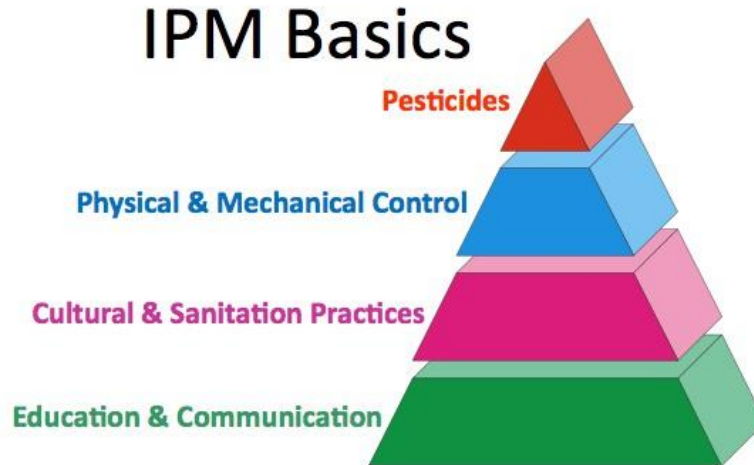

IPM Basics

Education and Communication: The foundation for an effective IPM program is education and communication. We need to know what conditions can cause pest problems, why and how to monitor for pests, proper identification, pest behavior and biology before we can begin to manage pests effectively. Communication about pest issues is essential. *A protocol for reporting pests or pest-conducive conditions and a record of what action was taken is the most important part of an effective IPM program.*

Cultural & Sanitation: Knowing how human behavior encourages pests helps you prevent them from becoming a problem. Small changes in cultural or sanitation practices can have significant effects on reducing pest populations. Cleaning under kitchen serving counters, reducing clutter in classrooms, putting dumpsters further from kitchen door/loading dock, proper irrigation scheduling, and over-seeding of turf areas are all examples of cultural and sanitation practices that can be employed to reduce pests.

Physical & Mechanical: Rodent traps, sticky monitoring traps for insects, door sweeps on external doors, sealing holes under sinks, proper drainage and mulching of landscapes, and keeping vegetation at least 18 inches from buildings are all examples of physical and mechanical control.

Pesticides: IPM focuses on remediation of the fundamental reasons why pests are here; pesticides should be rarely used and only when necessary.

III. WHAT IS AN INTEGRATED PEST MANAGEMENT PLAN?

ORS 634.700 defines an IPM plan as a proactive strategy that:

(A) Focuses on the long-term prevention or suppression of pest problems through economically sound measures that:

- a) Protect the health and safety of students, staff and faculty;
- b) Protect the integrity of campus buildings and grounds;
- c) Maintain a productive learning environment; and
- d) Protect local ecosystem health;

(B) Focuses on the prevention of pest problems by working to reduce or eliminate conditions of property construction, operation and maintenance that promote or allow for the establishment, feeding, breeding and proliferation of pest populations or other conditions that are conducive to pests or that create harborage for pests;

(C) Incorporates the use of sanitation, structural remediation or habitat manipulation or of mechanical, biological and chemical pest control measures that present a reduced risk or have a low impact and, for the purpose of mitigating a declared pest emergency, the application of pesticides that are not low-impact pesticides;

(D) Includes regular monitoring and inspections to detect pests, pest damage and unsanctioned pesticide usage;

(E) Evaluates the need for pest control by identifying acceptable pest population density levels;

(F) Monitors and evaluates the effectiveness of pest control measures;

(G) Excludes the application of pesticides on a routine schedule for purely preventive purposes, other than applications of pesticides designed to attract or be consumed by pests;

(H) Excludes the application of pesticides for purely aesthetic purposes;

(I) Includes school staff education about sanitation, monitoring and inspection and about pest control measures;

(J) Gives preference to the use of nonchemical pest control measures;

(K) Allows the use of low-impact pesticides if nonchemical pest control measures are ineffective; and

(L) Allows the application of a pesticide that is not a low-impact pesticide only to mitigate a declared pest emergency or if the application is by, or at the direction or order of, a public health official.

The above definition is the basis for MITCH Charter School's IPM plan. This plan fleshes out the required strategy from ORS 634.700 – 634.750 for our school.

Note: As mentioned above, ORS 634.700 allows for the routine application of pesticides designed to be consumed by pests. To avoid a proliferation of pests and/or unnecessary applications of pesticides, we will not set out any ant or cockroach baits until first:

- 1) Informing staff in the area where the pests are that sanitation and exclusion are the primary means to control the pest.
- 2) Establishing an acceptable pest population density
- 3) Cleaning up any food debris in the area.
- 4) Sealing up any cracks or crevices where we know the pests are coming from.
- 5) Setting out sticky insect monitoring traps in the area using the sticky insect monitoring trap protocol.

IV. SCHOOL IPM PLAN COORIDINATOR

The Board of Directors designates the Executive Director as the IPM Plan Coordinator. The Executive Director is key to successful IPM implementation in our school, and is given the authority for overall implementation and evaluation of this plan. The Executive Director is responsible for:

A. Attending not less than six hours of IPM training each year

The training will include a general review of IPM principles and the requirements of ORS 634.700 – 634.750. It will also include hands-on training on updated exclusion practices, monitoring & inspection techniques, and management strategies for common pests.

B. Conducting outreach to the school community about the school's IPM plan;

The Executive Director (or designee) will provide training as outlined in Section V below.

C. Overseeing pest prevention efforts;

The Executive Director will work with administration, teachers, staff, and volunteers to reduce clutter and food in the classrooms, and seal up pest entry points.

D. Assuring that the decision-making process for implementing IPM is followed;

The Executive Director will continually assess and improve the pest monitoring, reporting, and action protocol.

E. Assuring that all notification, posting, and record-keeping requirements in section VII are met when the decision to make a pesticide application is made;

- F. Maintaining the approved pesticides list as per section VIII;
- G. Responding to inquiries and complaints about noncompliance with the plan; Responses to inquiries and complaints will be in writing and kept on record with the Executive Director.
- H. Placing and checking sticky insect monitoring traps around facility;
- I. Keeping records of pest complaints using pest logs located in the school office.
- J. Developing protocols and provisions for pest avoidance and prevention during construction and renovation projects. The Executive Director will be involved in drafting any bids, and will have the authority to halt construction projects if protocols and provisions for pest avoidance and prevention are not being met.

V. RESPONSIBILITIES + TRAINING/EDUCATION of SCHOOL EMPLOYEES

A. IPM Plan Coordinator: Executive Director

1. Training (see section IV above)
2. Responsibilities (see section IV above)

B. Janitorial / Maintenance Staff

MITCH Charter School contracts for janitorial services to clean the school. The Executive Director (or a designee) will verify with contracted janitorial services that their custodial staff are trained to identifying pest-conducive conditions, appropriate sanitation, monitoring, inspection, and reporting practices. MITCH Charter School relies on volunteers or contractors for facility maintenance. The Executive Director (or a designee) will verify maintenance contractors are trained to identifying pest-conducive conditions and mechanical control methods (such as door sweeps on external doors and sealing holes under sinks), and their responsibilities as outlined below.

C. Landscaping

MITCH Charter School's landscape maintenance is provided by Deering, the facility management company

Deering is responsible for:

- Reducing conditions conducive to weeds, gophers, moles, yellow jackets, and other outdoor pests.
- Keeping vegetation (including tree branches and bushes) at least 18 inches from building surfaces.
- Proper mulching in landscaped areas to reduce weeds.
- When the decision is made to apply a pesticide, following notification, posting, record-keeping and reporting protocols in Section VII.

D. Teachers and Staff

The Executive Director (or a designee) will train teachers and staff faculty at least once per year on the basic principles of IPM and their responsibilities as outlined below. These short (15 – 20 minutes) training are arranged by the Executive Director during the regularly scheduled staff meetings. During the training, the Executive Director will review the following with teachers and

staff:

- What pest-conducive conditions are (clutter, food debris, moisture, cracks, holes, etc.), and the importance of reporting these in a timely manner.
- The importance of keeping their classrooms and work areas free of clutter.
- The importance of having students clean up after themselves when food or drink is consumed in the classroom.

Teachers are responsible for:

Attending annual basic IPM training provided by the Executive Director (or designee).

Keeping their classrooms and work areas free of clutter.

Making sure students clean up after themselves when food or drink is consumed in the classroom.

Reporting pests and pest-conducive conditions to the Executive Director in person or by email; in emergency situations, by phone.

E. Other

Basic training on the principles of IPM and the main points of this IPM Plan should also be provided to volunteers and students. Volunteers are responsible for reporting pests and pest-conducive conditions to the Executive Director. Students are responsible for reporting pests to their teachers.

VI. IPM PROCESS

Monitoring – Reporting – Action Protocol

Monitoring is the most important requirement of ORS 634.700 – 634.750. It is the backbone of our school's IPM Program. It provides recent and accurate information to make intelligent and effective pest management decisions. It can be defined as the regular and ongoing inspection of areas where pest problems do or might occur. Information gathered from these inspections is always written down.

As much as possible, monitoring should be incorporated into the daily activities of school staff. Staff training on monitoring should include what to look for and how to record and report the information.

Monitoring & Reporting – All Staff

After a brief (15 – 20 minute) training by the Executive Director (or designee) on pests and pest-conducive conditions, staff will be expected to report pests or pest-conducive conditions they observe during the normal course of their daily work. Reporting will be done verbally or by e-mail to the Executive Director or other administrative staff.

Monitoring & Reporting – Janitorial/Maintenance Contractors

During the normal course of their work, janitorial and maintenance contractors will monitor structures and building perimeters for:

- Pest-conducive conditions inside and outside the building (structural deterioration, holes that allow pests to enter, conditions that provide pest harborage).
- The level of sanitation inside and out (waste disposal procedures, level of cleanliness inside and out, conditions that supply food and water to pests)
- The amount of pest damage and the number and location of pest signs (rodent droppings, termite shelter tubes, cockroaches caught in sticky traps, etc.)
- Human behaviors that affect the pests (food preparation procedures, concessions procedures, classroom food, etc.)

- Their own management activities (caulking/sealing, cleaning, setting out traps, treating pests, etc.) and their effects on the pest population.
- Any pests or pest-conducive conditions will be reported to the Executive Director either orally, by e-mail or written letter.

Monitoring & Reporting – Landscaping

During regular landscaping activities, the crew will monitor for invasive weeds, gophers, moles, yellow jackets, and other outdoor pests. These will be reported to Deering, the facility management company, who will contact the school's Executive Director by phone or e-mail.

Sticky monitoring traps for insects

Sticky traps are neither a substitute for pesticides nor an alternative for reducing pest populations, but rather a diagnostic tool to aid in identifying a pest's presence, their reproductive stage, the likely direction pests are coming from, and the number of pests.

- All staff will be made aware of the traps and their purpose so they don't disturb them. The Executive Director (or designee) will be responsible for setting them out and checking them once per month, and replacing them once every four months.
- Sticky monitoring traps will be placed in the kitchen and any other "pest-vulnerable areas" the Executive Director deems necessary.
- Kitchen sticky insect traps will be checked monthly (primarily for drain flies, ants, and cockroaches).

Monitoring for Mice

In addition to monitoring for signs of mice (droppings, gnawing, hair, etc.), snap traps will be placed in the kitchen (and any other area the Executive Director deems necessary), and checked monthly by the Executive Director (or designee)

Reporting (pests, signs of pests, and conducive conditions)

When staff observe pests or pest-conducive conditions they should tell or e-mail, the Executive Director or other administrative staff.

Reporting "Pests of Concern"

"A pest of concern" is a pest determined to be a public health risk or a significant nuisance pest. These include cockroaches (disease vectors, asthma triggers), mice & rats (disease vectors, asthma triggers), yellow jackets (sting can cause anaphylactic shock), cornered nutria, raccoons, cats, dogs, opossums, skunks (they can bite), and bed bugs (significant nuisance pest).

When pests of concern (or their droppings, nests, etc.) are observed, staff should contact the Executive Director immediately.

Action!

Structural

Any items (such as sealing up holes) that staff or volunteers observe that they can resolve should be taken care of and reported to Executive Director. The Executive Director will keep records of these actions using Pest Logs.

If the actions needed are not something that can be accomplished alone with minimal time, the Executive Director will develop a plan of action with a proposed deadline for completion based on the severity of the risk or nuisance.

The Executive Director will inform the Board of Directors of actions being taken/work

performed, and monitor the completion of all work. The Executive Director will keep records of actions taken/work performed using Pest Logs.

The Executive Director will keep records of time and money spent to manage pests.

Grounds

When pests on grounds reach a threshold established by Deering Management, action will be taken as per guidelines developed by Deering Management and MITCH Charter School. Actions taken by landscape crews to manage pests will be reported to the Executive Director who will keep records of actions taken/work performed using Pest Logs.

Acceptable Thresholds

A threshold is the number of pests that can be tolerated before taking action. The acceptable threshold for cockroaches, mice, rats, raccoons, cats, dogs, opossums, skunks, and nutria is 0.

Inspections

The Executive Director will conduct an annual inspection using the annual IPM inspection form. During the inspection he or she will also inspect or review:

- Human behaviors that affect the pests (working conditions that encourage or support pests, food preparation procedures that provide food for pests, etc.)
- Management activities (caulking/sealing, cleaning, setting out traps, treating pests, etc.) and their effects on the pest population.

Pest Emergencies (see also Section VII. B. below)

IMPORTANT: If a pest emergency is declared, the area must be evacuated and cordoned off before taking any other steps. When the Executive Director, after consultation with school faculty and administration, determines that the presence of a pest or pests immediately threatens the health or safety of students, staff, teachers and others present may declare a pest emergency. Examples include (but are not limited to) yellow jackets swarming in areas frequented by children, a nutria in an area frequented by children, a half a dozen mice or rats running through occupied areas of a school building. The Executive Director will keep records of actions taken using Pest Logs.

Annual IPM Report (completed by Executive Director)

In January of each year, the Executive Director will provide the Board of Directors an annual IPM report. The report will include a summary of data gathered from Pest Logs, e-mails or the Director's notes, as well as costs for PMPs and pesticides (including turf and landscape pesticides). Costs for items such as sealants, fixing screens, door sweeps and other items that would not normally be considered part of pest control will not be recorded.

Prevention and management steps taken that proved to be ineffective and led to the decision to make a pesticide application will be copied and pasted or incorporated into the annual report of pesticide applications (see section VII. D)

VII. PESTICIDE APPLICATIONS: REQUIRED NOTIFICATION, POSTING, RECORD KEEPING, AND REPORTING

Any pesticide application (this includes weed control products, ant baits, and all professional and over-the-counter products) on school property must be made by a licensed commercial or public pesticide applicator. At the beginning of each school year, all teachers, administrators, staff, and parents will be given a list of potential pesticide products that could be used in the

event that other pest management measures are ineffective. They will also be informed of the procedures for notification and posting of individual applications, including those for pest emergencies. This information will be provided to all the above via e-mail to parents.

Notification and Posting for Non-emergencies

When prevention or management of pests through other measures proves to be ineffective, the use of a low-risk pesticide is permissible. *Documentation of these measures is a pre-requisite to the approval of any application of a low-risk pesticide. This documentation will remain on file with the Executive Director.*

Non-emergency pesticide applications may occur in or around a school before or after school is in session, unless the Executive Director authorizes an exception. If the labeling of a pesticide product specifies a reentry time, a pesticide may not be applied to an area where the school expects students to be present before expiration of that reentry time. If the labeling does not specify a reentry time, a pesticide may not be applied to an area where the school expects students to be present before expiration of a reentry time that the Executive Director determines to be appropriate based on the times at which students would normally be expected to be in the area, area ventilation and whether the area will be cleaned before students are present.

The Executive Director (or a designee) will give written notice of a proposed pesticide application via e-mail at least 24 hours before the application occurs.

The notice must identify the name, trademark or type of pesticide product, the EPA registration number of the product, the expected area of the application, the expected date of application and the reason for the application.

The Executive Director (or a designee) shall place warning signs around pesticide application areas beginning no later than 24 hours before the application occurs and ending no earlier than 72 hours after the application occurs.

A warning sign must bear the words “Warning: pesticide-treated area”, and give the expected or actual date and time for the application, the expected or actual reentry time, and provide the telephone number of a contact person (the person who is to make the application and/or the Executive Director).

Notification and Posting for Emergencies

Important Notes:

- 1) *The Executive Director may not declare the existence of a pest emergency until after consultation with teachers and staff.*
- 2) *If a pesticide is applied at school due to a pest emergency, the Executive Director shall review the IPM plan to determine whether modification of the plan might prevent future pest emergencies, and provide a written report of such to the Board of Directors.*
- 3) *The Board of Directors shall review and take formal action on any recommendations in the report.*

The declaration of the existence of a pest emergency is the only time a non low-impact pesticide may be applied.

If a pest emergency is declared, the area must be evacuated and cordoned off before taking any other steps.

If a pest emergency makes it impracticable to give a pesticide application notice no later than 24 hours before the pesticide application occurs, the Executive Director shall send the notice no later than 24 hours after the application occurs.

The Executive Director (or designee) shall place notification signs around the area as soon as practicable but no later than at the time the application occurs.

Note: ORS 634.700 also allows the application of a non-low-impact pesticide “by, or at the direction or order of, a public health official”. If this occurs, every effort must be made to comply with notification and posting requirements above.

Record Keeping of Pesticide Applications

The Executive Director or designee shall keep a copy of the following pesticide product information on file in the school office:

- A copy of the label
- A copy of the MSDS
- The brand name and USEPA registration number of the product
- The approximate amount and concentration of product applied
- The location of the application
- The pest condition that prompted the application
- The type of application and whether the application proved effective
- The pesticide applicator’s license numbers and pesticide trainee or certificate numbers of the person applying the pesticide
- The name(s) of the person(s) applying the pesticide
- The dates on which notices of the application were given
- The dates and times for the placement and removal of warning signs
- Copies of all required notices given, including the dates the Executive Director gave the notices

The above records must be kept on file in the office for at least four years following the application date.

Annual Report of Pesticide Applications

In January of each year, the Executive Director will provide the Board of Directors an annual report of all pesticide applications made the previous year. The report will contain the following for each application:

- The brand name and USEPA registration number of the product applied
- The approximate amount and concentration of product applied
- The location of the application
- The prevention or management steps taken that proved to be ineffective and led to the decision to make a pesticide application
- The type of application and whether the application proved effective

VIII. APPROVED LIST OF LOW-IMPACT PESTICIDES

Note: All pesticides used must be used in strict accordance with label instructions.

According to ORS 634.705 (5), the Board of Directors shall adopt a list of low-impact pesticides for use with their integrated pest management plan. The governing body may include any product on the list except products that:

- Contain a pesticide product or active ingredient that has the signal words “warning” or “danger” on the label;
- Contain a pesticide product classified as a human carcinogen or probable human carcinogen under the United States Environmental Protection Agency 1986 Guidelines for Carcinogen Risk Assessment; or
- Contain a pesticide product classified as carcinogenic to humans or likely to be carcinogenic to humans under the United States Environmental Protection Agency 2003 Draft Final Guidelines for Carcinogen Risk Assessment.

As a part of pesticide registration under the Federal Insecticide Fungicide and Rodenticide Act (FIFRA) and re-registration required by the Food Quality Protection Act (FQPA), EPA Office of Pesticide Programs (OPP) classifies pesticide active ingredients (a.i.) with regards to their potential to cause cancer in humans. Depending on when a pesticide active ingredient was last evaluated the classification system used may differ as described above.

The National Pesticide Information Center (<http://npic.orst.edu/>) can be contacted at 1.800.858.7378 or npic@ace.orst.edu for assistance in determining a pesticide a.i. cancer classification.

The most current list of approved low-impact pesticides is included as an appendix to this IPM plan.
